

Create a simple animated HTML5 banner

1. Requirements

- a) Create an animation of the text (Note! There are two frames with different text) and CTA button using the provided [Template](#) - animation of the image isn't obligatory
- b) Make this creative clickable. When the user clicks on the banner (a whole area), it will be redirected to <https://google.com>
- c) Add preloader (including images)
- d) Additional requirements:
 - Please keep the final size under 200kB
 - The code must be clean and understandable for other programmers
 - If you use some popular libraries (e.g. GSAP), please use [Studio hosted JavaScript libraries](#)

2. Suggestions/Technology

There are no restrictions when it comes to the technologies used. Animations can be done in **CSS**, pure **javascript**, as well as using additional libraries, such as GSAP.

After watching a [Video](#) with an original creative, you can use similar animation, but we are looking for people with a fresh approach, so new ideas are welcome.
